

Project Part 1: Topic Selection

KeiTruck Hub – Exploring Japan’s Mini Trucks

Description:

KeiTruck Hub is a website dedicated to showcasing the world of Kei trucks, Japan’s small but mighty utility vehicles. The site will showcase various models, applications, and modifications of Kei trucks, making it a valuable resource for enthusiasts and curious visitors. Users will be able to browse galleries, read about specifications, and even explore customization ideas. With a growing global interest in importing Kei trucks, the website will also provide helpful guides on buying, importing, and maintaining them. By combining visuals, technical information, and user interaction, KeiTruck Hub will serve as a one-stop destination for all things Kei truck-related.

List of Page Names:

1. Home
2. About Kei Trucks
3. Models & Specs
4. Custom Builds (Gallery)
5. Importing/Ownership Guide
6. Contact

The website will store a database of Kei truck models, with details such as model name, manufacturer, engine size, year, and key features. Users will be able to create accounts and save their favorite models to a personal “favorites list.” The site will also store information about user-submitted custom builds, including photos, descriptions, and modification details. Administrators will be able to add, edit, or delete Kei truck models and custom build entries, while regular users can only view and save them. A login system with account security will be required for personal favorites.

Sidenote:

Another idea I have, which is similar to this one, would be more focused on how Kei trucks can be made easier to import and drive legally in most states. It can include import rules, safety requirements, and maybe the possibility of them being produced in the US.
